		Units with one-side display and character height of 160 and 250 mm
		Units with double-sided display and character height of 160 and 250 mm

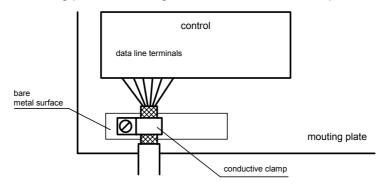

Chapter 1	Safety precautions
Important information	Read these operating instructions before starting the unit. They provide you with important information on the use, safety and maintenance of the units. This helps you to protect yourself and prevent damage to the unit.
	Information intended to help you to avoid death, bodily harm or considerable damage to property are highlighted by the warning triangle shown here; it is imperative that this information be properly heeded.
	The operating instructions are intended for trained professional electricians familiar with the safety standards of electrical technology and industrial electronics.
	Store these operating instructions in an appropriate place.
	The manufacturer is not liable if the information in these operating instructions are not complied with.
Safety	Components inside the units are energized with electricity during operation. For this reason, mounting and maintenance work may only be performed by professionally-trained personnel while observing the corresponding safety regulations.
	The repair and replacement of components and modules may only be carried out by the manufacturer for safety reasons and due to the required compliance with the documented unit properties.
	The units do not have a power switch. They are operative as soon as the operating voltage is applied.
Intended use	The units are intended for use in industrial environments. They may only be operated within the limit values stipulated by the technical data.
	When configuring, installing, maintaining and testing the units, the safety and accident-prevention regulations relevant to use in each individual case must be complied with.
	Trouble-free, safe operation of the units requires proper transport, storage, installation, mounting and careful operation and maintenance of the units.
Mounting and installation	The attachment options for the units were conceived in such a way as to ensure safe, reliable mounting.
	The user must ensure that the attachment hardware, the unit carrier and the anchoring at the unit carrier are sufficient to securely support the unit under the given surrounding conditions.
	The units are to be mounted in such a way that they can be opened up while mounted. Sufficient space for the cables must be available in the unit near the cable infeed.
	Sufficient space is to be kept clear around the units to ensure air circulation and to prevent the build-up of heat resulting from use. The relevant information must be heeded in the case of units ventilated by other means.
	When the housing fasteners are opened, the front frame of the housing hinges out upward or downward (depending on the unit version) automatically.

Battery replacement The units have a lithium battery used for data security of the real-time clock. The battery can explode if replaced improperly.

Grounding All devices are equipped with a metal housing. They comply with safety class I and require a protective earth connection. The connecting cable for the operating voltage must contain a protective earth wire of a sufficient cross section (DIN VDE 0106 part 1, DIN VDE 0411 part 1).

EMV-measures The devices comply with the EU Directive 89/336/EEC (EMC Directive) and provide the required interference immunity. Observe the following when connecting the operating voltage and data cables:

- Use shielded data cables.
- The data and operating voltage cables must be laid separately. They may not be laid together with heavy-current cables or other interference-producing cables.
- The cable thickness must be properly assessed (DIN VDE 0100 Part 540).
- The cable lengths inside the units are to be kept as short as possible to prevent interference. This applies especially to unshielded operating voltage cables. Shielded cables are also to be kept short due to any interference which might be emitted by the shielding.
- Neither excessively long cables nor cable loops may be placed inside the units.
- The connection of the cable shielding to the functional ground (PE) must be as short and low-impedance as possible. It should be made directly to the mounting plate over a large area with a conductive clip:

 The cable shielding is to be connected at both cable ends. If equipotential bonding currents are expected due to the cable arrangement, electrical isolation is to be performed on one side. In this case, capacitive connection (approx. 0.1µF/600 V AC) of the shielding on the isolated side must occur.

Disposal

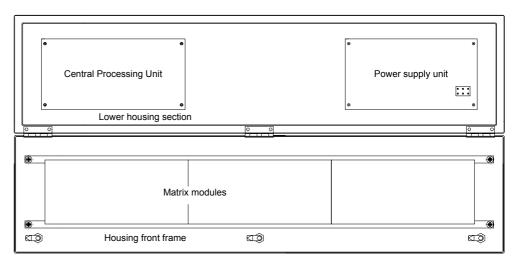

Units or unit parts which are no longer needed are to be disposed of in accordance with the regulations in effect in your country.

Chapter 2	Unit description
Model designation	The model designation of the units is:
0	SX602-xxx/xx/xx-xxx/xx-E0
	x = The 'x's in the model designation indicate the size and design of the units (see Chapter 9).
Unit construction	The following figure shows model type SX602-10/10/xx-xxx/xx-xx as example for the other model types. The front frame of the housing is locked with quick-action releases and can be hinged downward for opening the unit.

<b>@</b>	۱	<b>(</b>
a 1: 12 iz - 11'11	e	riebert <sup>e</sup>

The following figure shows the unit when open and reveals the modular construction of the units. All components, controls and connections are directly accessible.

The display modules (LED matrix modules) are found inside the housing front frame. The control computer and power supply unit are located in the lower housing section.

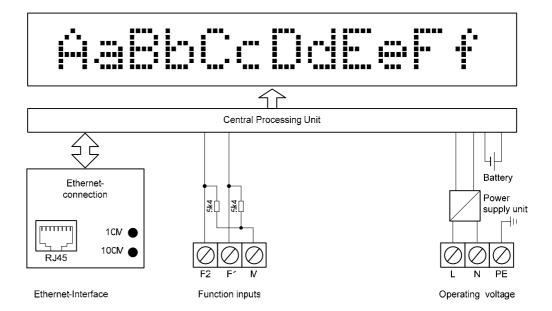

## **Display range**

The series SX602 includes devices with the following display range:

Character height 160 mm: Character height 250 mm: 4, 6, 8, 10 and 12 characters 4, 6 and 8 characters

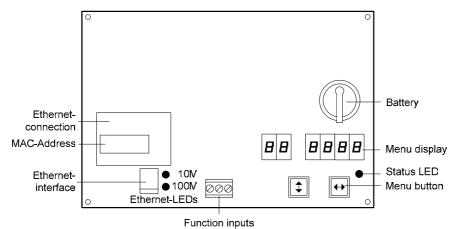

The devices with double-sided display (SX602-xxx/xx/xx-2xx/xx-xx) show the same information on the front and rear side.

## Principle circuit diagram

## **Central Processing Unit**

## The following figure shows the Central Processing Unit:

## Ethernet interface

The Ethernet interface is used for activation of the devices. It is a standard-RJ45 socket and has the following specifications:

Data rate:	10/100 Mbps, Automatic detection
Galvanic separation:	1,5 kV
Supported protocols:	ICMP, ARP, IP, TCP, UDP, DHCP, Telnet and HTTP
Operation modes:	TCP Server, TCP Client and UDP
	The units are set-up as TCP server by default. The data is transmitted to port 8000 via a socket connection.
Configuration:	The basic configuration can be set up without external aids via the menu (see chapter 5). Further settings can be done via Web Browser or Telnet console (see chapter 4).
The Telnet and HTTP or	cotocols are used exclusively for configuration not for data

The Telnet and HTTP protocols are used exclusively for configuration, not for data transmission.

Function inputs	The function inputs allow, independently of commands via the Ethernet interface, a reduction the brightness and the flashing of the display (see chapter 4). They are located on a screw-type terminal strip. The function inputs are PLC-compatible and are designed for the following signal voltages:
	Signal voltage: L = -3.5+5 V (open input = L) H = +1830 V (active H), M = reference potential
Menu display	The parameterization of the devices is carried out in a menu of the menu display.
	In normal operation, the following status messages appear in the menu display:: DnlinE Data are received at the interface. dRER The device detects a telegram ending. No data are received at the interface.
	In programming operation, the following status messages appear in the menu display: LoRd Static texts are loaded in the text memory. rERd Static texts are read from the text memory.
Status indicator	The data LED illuminates when data is being received.
Ethernet-LEDs	The data transmission rate is detected automatically and displayed via the 100M and 10M Ethernet LEDs. A permanently lit LED signals a connection having the indicated speed. Flickering means additional data exchange.
Battery	The lithium battery (type CR2032) provides a power reserve for the real-time clock. It is located in a battery holder, thus making battery replacement easy. The battery is to be replaced with a new one after three years.
Power supply	The power supply of the devices (230 V AC) is connected to the terminals L, N and PE.

Chapter 3	Character displa	ay

line/uale	\$RD₊J	Ethernet interface	[43]

Online texts Dynamic texts are transmitted to the display as data telegrams [1]. Any text found in the display is cleared when an online text is received.

Static texts Static texts are called up using the command \$**Tn**, [2]. **n** is the text number; it can be from one to four digits. Any text in the display is cleared when a fixed text is called up.

Initial text Once the operating voltage has been applied, an LED dot in the upper left-hand corner of the display illuminates to indicate that the unit is ready for operation. If an initial text is to appear in the display instead (e.g. 'System operational'), this text is to be saved in the text memory with text number 0, and displaying of the initial text is to be set in menu item 20 (see Chapter 5).

Inserting variables This operating mode is used when the units are to display so-called text masks, in which only certain characters are changed, e.g. for the updating of numerical values as in the following:

# Temp. 172 °C

The text parts *Temp.* and °C are fixed and do not change. The numbers, on the other hand, are continually updated variable text components.

In principle, updating could occur with online texts containing both the fixed and the variable text components. The data transfer required here is considerable, however.

The SX602 series offers the advantageous alternative of a one-time transmission of the fixed text components to the display and subsequent insertion of just the appropriate characters (variables) to update the variable text components. In the example, the fixed text parts *Temp.* and °C are displayed by means of the following data telegram.

\$M1Temp. \$VS\$VS\$VS °C\$↓

The place holders for variables to be inserted later are marked with **\$vs** [19]. They first appear blank in the display. A variable corresponds to a character to be displayed. Up to 256 variables can be inserted into a text.

The place holder from which the variables are to be inserted in the text (insertion position) is marked with the vpn command [4]. n is the running number of variables; it can be from one to three digits (0 – 255). In the example, the first insertion position is marked with the vpn command.

Insertion of the variables in the place holders occurs with the vecc... command [3]. cc... stands for any characters. In the example, the variables are inserted with the data telegram ve1724.

	In the example, the fixed text components were shown in the display as online text. Alternatively, they can be prepared as a fixed text called up from the text memory. The place holders for the variables are also to be marked with <b>\$vs</b> in the fixed text.
Deleting text	Any text in the display is cleared with the \$E↓ command [5]. An LED dot then illuminates in the upper left-hand corner of the display.
Forced line break	If the text contains more characters than can be displayed in one line, a line break is inserted automatically at the end of the line, and the text is continued in the next line. A line break can also be forced at a certain place in the text, for example for correct hyphenation [6] using the command $c$ .
Flashing	Including <b>\$F1</b> in the data string causes the following characters to flash [7]. As soon as <b>\$F0</b> appears in the data string, the following characters are displayed statically [8].
	Flashing of the entire display can be activated with the \$ <b>F1</b> ↓ command [33] and deactivated with the <b>\$F0</b> ↓ command [34].
	Flashing of the entire display can also be activated with a high signal level at function input F2. The function input has priority over the commands.
Marquee text	Marquee text display is activated from the current position in the text with the \$x command [9]. It remains active up to the end of the text or a forced line break (\$C).
Character set	The texts are displayed with the character set specified in menu item 22 as default (see Chapter 5). For loading another character set, one of the commands \$м1, \$м2 or \$м5 must be contained in the text [10, 11, 14].
	The commands \$м1 and \$м2 load the permanently installed character sets Acala 7 [10] and Acala 7 extended [11].
	A user-defined character set [14] can be loaded with the command \$м₅.The Acala 7 P character set is preinstalled here. It can be replaced by a character set created by the user, for example.
	The commands <b>\$м3</b> [12], <b>\$м4</b> [13] and <b>\$м6</b> [15] must not be used.
	The optional character sets and a tool for generating user-defined character sets are included on a data medium. The tool is also used to install character sets, to save character sets to data media and to read back installed character sets.
LED color	Devices with switchable LED color (see chapter 3) display the texts in red by default. For a color change, the command <b>\$A0</b> (red), <b>\$A1</b> (green) or <b>\$A2</b> (orange) must be contained in the text [1618].
Inserting time/date	The units have a real-time clock with a date and weekday display. The current time, date or parts of them can be inserted into the text with the $\$$ H and $\$$ D commands [20 – 30]. The year can be displayed with four [24, 28] or two [25, 29] digits.
	The day of the week is displayed abbreviated to two letters in the language set in menu item 23 (see Chapter 5).

Bar graph	The <b>\$Gnnnn</b> command activates the bar graph display [31]. nnnn stands for the number of illuminating columns, i.e. the length of the bar graph and must always be four digits.
	The illuminating color of the bar graph can only be red or green. The \$A2 command for the color orange [18] is ignored in bar graph mode].
\$ character	The command for displaying the '\$' character is <b>\$\$</b> [32].
Brightness	The brightness of the display can be reduced with the \$B1↓ command [36] and reset to the normal brightness with the \$B0↓ command [35].
	The brightness can also be reduced with a high signal level on function input F1. The function input has priority over the control commands.
Blanking	Blanking of the display can be activated with the \$B2,J command [37] and deactivated with the \$B0,J or \$B1,J commands [35, 36]. The text in the display is not cleared here.
Reset	The \$0,J command restarts the unit [38].
Setting time/date	Setting of the time occurs with the \$SHhhmmss، command [39]. hh stands for hours (24-hour format), mm for minutes and ss for seconds (e.g. \$SH204515, = 20:45:15 Uhr).
	Setting of the date occurs with the \$SDddmmyy، command [43]. dd stands for the day, mm for the month and yy for the year (e.g. \$SD200804، = 20.08.2004).
	Setting of the weekday occurs with the $\$sw_{x-1}$ command [41]. x stands for the respective weekday: 1 = Monday, 2 = Tuesday, 3 = Wednesday, 4 = Thursday, 5 = Friday, 6 = Saturday and 7 = Sunday. The day of the week is displayed abbreviated to two letters in the language set in menu item 23 (see Chapter 5).
	The time, date and weekday can also be set in menu items 90 – 95 (see Chapter 5).
Reading out time/date	The current time can be read out via the interface with the \$RHJ command [45], and the current date, including the weekday, with the \$RDJ command [46].

Chapter 5	Parameterization				
Menu display	The parameterization of the devices is carried out in a menu of the menu display. In normal operation, the status messages appear in the menu display (see chapter 2).				
Menu operation		ress both menu buttons simultaneou eard and menu item 01 appears in e menu as follows:			
	Next menu item: Page menu items forv Previous menu item: Page menu items bac	Double click on key [\$]	keep it pressed		
	Next setting Page settings forward Previous setting Page setting backward	Double click on key [↔]			
	saved (set), not save	enu item 99 with the button [\$]. The d (escape) or the factory settings, e on the setting selected in menu item 9	except for menu item 01,		
	Canceling the menu without saving the settings made is possible by pressing both menu buttons longer (approx. 1 sec.) or will occur automatically if 60 seconds pass without a menu button being pressed.				
	Once the menu is closed, the unit behaves in the same manner as when the operating voltage was applied.				
	An LED dot illuminates in the upper left-hand corner of the display in menu mode. Control of the display is not possible in menu mode.				
Menu table	marked with an *. Ind	isplayed in the following menu table vidual menu items or settings can b on the unit version or setting.

Time-out	In menu item 10, it is possible to set whether a time-out occurs, and if so, after what time. Time-out means that the display is cleared if it has not received a data telegram after a defined time period. An LED dot then illuminates in the upper left-hand corner of the display.
Initial text	Once the operating voltage has been applied, an LED dot in the upper left-hand corner of the display illuminates to indicate that the unit is ready for operation. If an initial text is to appear in the display instead (e.g. 'System operational'), this text is to be stored in the text memory with text number 0, and displaying of the initial text is to be set in menu item 20.
	If a display test is preselected in menu item 24, it appears in the display before the initial text.
Paging interval	If a text contains more characters than can be shown in the display, it is automatically displayed in paging mode. The page change interval can be set between 3 and 30 seconds in menu item 21.
Character set	In menu item 22, you can set the default character set used to display the texts.
	The character sets Acala 7 and Acala 7 extended are permanently installed in the units.
	A user-defined character set can be loaded with the setting $\amalg$ I. The Acala 7 P character set is preinstalled here. It can be replaced by a character set created by the user, for example.
	The settings IYE, IYE and $\Box Z$ must not be used.
	The optional character sets and a tool for generating user-defined character sets are included on a data medium. The tool is also used to install character sets, to save character sets to data media and to read back installed character sets.
Language	In menu item 23, you can set the language in which the weekday is displayed (abbreviated to two letters).
Display test	In menu item 24, you can set whether a display test is to be performed after the operating voltage is applied.
Network parameters	The network parameters can be set in the menu and no external aids are necessary. Afterwards the units can be accessed via the network. Further settings can then be made via the network (see chapter 6).
	In the IP menu item, static address assignment or DHCP must be selected.
	In the I1I4 menu items, the four bytes of the IP address are set, if static address assignment has been selected.
	In the G1G4 menu items, the four bytes of the standard gateway address are set, if static address assignment has been selected.
	In the S1S4 menu items, the four address bytes of the Subnet Mask are set, if static address assignment has been selected.

Upon resetting the factory settings (Default) in menu item 99, the following network parameters are set:

- Static address assignment
- IP-Address192.168.127.254
- Subnet Mask 255.255.000.000
- Standard-Gateway 192.168.127.001

Time/date

The year, month, day and weekday of the real-time clock are set in menu items 90 - 93. The time at which the clock is to be started is set in menu items 94 - 95. Then select menu item 99 and select the setting 5EE there. When the set time is reached, briefly press the left menu button [ $\uparrow$ ] the clock is now set to the current time.

If the settings in menu items 90 - 93 (date) and 94 - 95 (time) are not changed when the menu is run through, the current settings for the time, date and weekday are retained when the menu is exited. Therefore, the clock only needs to be set when running through the menu if this is intended.

Setting the clock can also occur with control commands via the Ethernet interface (see Chapter 4).

Attention: Setting unrealistic date values, e.g. 31/02/06 can lead to unpredictable date displays and is therefore impermissible.

Chapter 6	Configuration	
MAC address	The MAC address of the unit is to be found on the Ethernet coupling of the control processor (see label). It is possibly needed for commissioning and should be written down on page 2 of this operating manual before the unit is mounted on a hardly accessible location.	
Basic configuration	The basic configuration can be set up without external aids via the menu (see chapter 5). To integrate the unit in the network, either DHCP must be activated, or the static IP address, the relevant Subnet Mask and, if necessary, the IP address of the standard gateway must be set. These values are assigned by the system administrator and should be known before putting the unit into operation.	
Configuration via network	As soon as the units can accessed via TCP/IP, additional configuration can take place via Telnet and HTTP. Access can be password-protected or can be deactivated, to prevent unauthorized operations. As-delivered and after setting the default in menu item U, access is enabled.	
Additional information	The configuration dialogs are self-explanatory. For detailed information, please refer to the documentation of the Ethernet coupling (Moxa NE4100T type). For further information and PC tools, please go to <i>www.moxa.com</i> .	
Basic setting	Via Telnet and HTTP the gateway can inadvertently be parameterized so that it is no longer accessible via the network. In this case the gateway can be rest in a defined status via menu and selection of default in menu item U (see chapter 4) and after resetting of the network parameters it can be accessed via network again.	

Chapter 7	Status messages	

Fault messages

Serious faults due to improper operation or faulty operating conditions are indicated in the display. The following messages are possible:

Fault message	Cause	Elimination
No Text	The text called up is not saved in the fixed text memory.	The text is to be loaded into the fixed text memory.
Syntax Error	A faulty command was sent to the display	The command must be corrected (see command table in chapter 6).

### Max. power consumption

## Units with character height of 50 mm

#### One-sided display

SX602-20/05/0R-1xx/xx-xx	approx. 45 VA
SX602-20/05/0M-1xx/xx-xx	approx. 85 VA
SX602-40/05/0R-1xx/xx-xx	approx. 75 VA
SX602-40/05/0M-1xx/xx-xx	approx. 130 VA

Units with character height of 100 mm

One-sided display	
SX602-10/10/0R-1xx/xx-xx	approx. 40 VA
SX602-10/10/0G-1xx/xx-xx	approx. 40 VA
SX602-20/10/0R-1xx/xx-xx	approx. 75 VA
SX602-20/10/0G-1xx/xx-xx	approx. 75 VA

Double-sided display

Boable elaca alepiaj	
SX602-20/05/0R-2xx/xx-xx	approx. 85 VA
SX602-20/05/0M-2xx/xx-xx	approx. 165 VA
SX602-40/05/0R-2xx/xx-xx	approx. 170 VA
SX602-40/05/0M-2xx/xx-xx	approx. 320 VA

### Double-sided display

SX602-10/10/0R-2xx/xx-xx	approx. 75 VA
SX602-10/10/0G-2xx/xx-xx	approx. 75 VA
SX602-20/10/0R-2xx/xx-xx	approx. 150 VA
SX602-20/10/0G-2xx/xx-xx	approx. 150 VA

## Units with character height of 160 mm

One-sided display	
SX602-04/16/0R-1xx/xx-xx	approx. 45 VA
SX602-04/16/0G-1xx/xx-xx	approx. 45 VA
SX602-06/16/0R-1xx/xx-xx	approx. 60 VA
SX602-06/16/0G-1xx/xx-xx	approx. 60 VA
SX602-08/16/0R-1xx/xx-xx	approx. 80 VA
SX602-08/16/0G-1xx/xx-xx	approx. 80 VA
SX602-10/16/0R-1xx/xx-xx	approx. 95 VA
SX602-10/16/0G-1xx/xx-xx	approx. 95 VA
SX602-12/16/0R-1xx/xx-xx	approx. 110 VA
SX602-12/16/0G-1xx/xx-xx	approx. 110 VA

### Double-sided display

SX602-04/16/0R-2xx/xx-xx	approx. 80 VA
SX602-04/16/0G-2xx/xx-xx	approx. 80 VA
SX602-06/16/0R-2xx/xx-xx	approx. 115 VA
SX602-06/16/0G-2xx/xx-xx	approx. 115 VA
SX602-08/16/0R-2xx/xx-xx	approx. 150 VA
SX602-08/16/0G-2xx/xx-xx	approx. 150 VA
SX602-10/16/0R-2xx/xx-xx	approx. 180 VA
SX602-10/16/0G-2xx/xx-xx	approx. 180 VA
SX602-12/16/0R-2xx/xx-xx	approx. 215 VA
SX602-12/16/0G-2xx/xx-xx	approx. 215 VA

## Units with character height of 250 mm

One-sided display	
SX602-04/25/0R-1xx/xx-xx	approx. 90 VA
SX602-04/25/0M-1xx/xx-xx	approx. 140 VA
SX602-06/25/0R-1xx/xx-xx	approx. 135 VA
SX602-06/25/0M-1xx/xx-xx	approx. 205 VA
SX602-08/25/0R-1xx/xx-xx	approx. 180 VA
SX602-08/25/0M-1xx/xx-xx	approx. 270 VA

Double-sided display	
SX602-04/25/0R-2xx/xx-xx	approx. 170 VA
SX602-04/25/0M-2xx/xx-xx	approx. 270 VA
SX602-06/25/0R-2xx/xx-xx	approx. 260 VA
SX602-06/25/0M-2xx/xx-xx	approx. 400 VA
SX602-08/25/0R-2xx/xx-xx	approx. 350 VA
SX602-08/25/0M-2xx/xx-xx	approx. 530 VA

The power consumption of the device versions SX602-xx/xx/0R-xxx/xx-xx also applies for the following device versions:

SX602-xx/xx/0G-xxx/xx-xx LED green SX602-xx/xx/2x-xxx/xx-xx LEDs for outdoor application

For units with built-in heating, the values for power consumption specified in the table increase by approx. 10 - 200 VA (exact values on request), depending on the unit size).

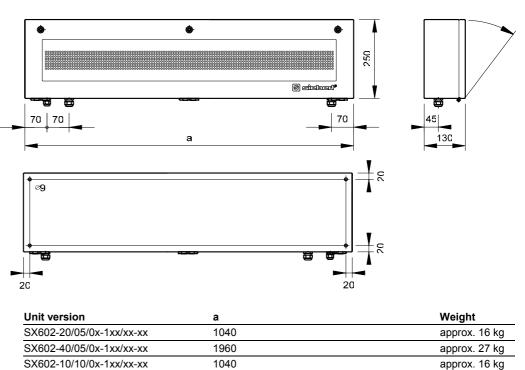

Fixed text memory	Capacity: Number of texts: Length of texts:	128 KBytes max. 10.000 max. 2048 characters
Real-time clock	Precision:	20 ppm

## Chapter 10

### Unit measurements and weights

Units with one-side display and character height of 50 and 100 mm The following figure shows unit version SX602-20/05/0x-1xx/xx-xx, representing the other unit versions listed in the following table. All dimensions are in mm.

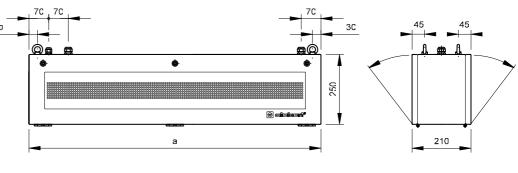

nits with double-sided	The following
enlay and character height	the other unit

SX602-20/10/0x-1xx/xx-xx

The following figure shows unit version SX602-20/05/0x-2xx/xx-xx, representing the other unit versions listed in the following table. All dimensions are in mm.

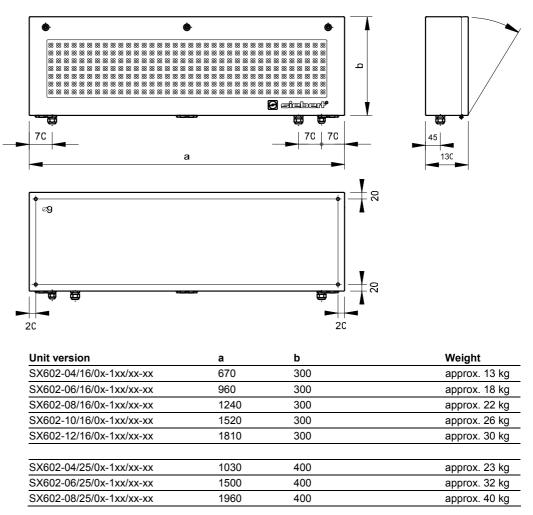

1960

Unit version	а	Weight
SX602-20/05/0x-2xx/xx-xx	1040	approx. 16 kg
SX602-40/05/0x-2xx/xx-xx	1960	approx. 27 kg
SX602-10/10/0x-2xx/xx-xx	1040	approx. 16 kg
SX602-20/10/0x-2xx/xx-xx	1960	approx. 27 kg

Units with double-sided display and character height of 50 and 100 mm approx. 27 kg

Units with one-side display and character height of 100 and 250 mm The following figure shows unit version SX602-06/16/0x-1xx/xx-xx, representing the other unit versions listed in the following table. All dimensions are in mm.

Units with double-sided display and character height of 100 and 250 mm

The following figure shows unit version SX602-06/16/0x-2xx/xx-xx, representing the other unit versions listed in the following table. All dimensions are in mm.
